

eZYORDER™ - Ordering in the palm of your hand

After spending three days every month stocktaking and organising an order by fax for 14 different suppliers, Michelle Dodt from Channon & Lawrence Dental Centre, a member of the Australian Dentists Practice Assistance Company Limited (ADPAC) in Queensland, decided enough was enough. It was just too time consuming! A solution to this common problem was then discovered courtesy of their Gunz representative, Teena Schick, who introduced ezyOrder to the practice. Since then, they haven't looked back.

ezyOrder offers a purchasing solution to dental practices by identifying each product with a unique barcode. Each barcode identifies the product by item code, description and supplier. This forms a personal catalogue tailored to the individual needs of the practice and contains a list of only the products you use in your individual surgery.

"I've been using ezyOrder for about three months now and it has definitely made an impact to our practice by reducing the time spent on ordering," Ms Dodt said.

"ezyOrder is a simple scanning process. Meaning its easy to identify who the supplier is and there is no confusion between us and the supplier as to what products we actually want. Anyone in the practice can be taught on how to use the scanner.

"The barcoded catalogue has made it faster and more accurate as no time is wasted on chasing where products comes from - you just scan the barcode and all necessary information is available."

Another feature of a barcoded catalogue is that labels can be printed and attached onto the shelves under each product in the stock room - making it twice as easy to order. You just walk into the room and scan... "we have placed labels in our stock room which has made products easy to scan and identify. When we run low on something, we just scan the bar code to order more," Ms Dodt said.

ezyOrder consolidates all your sup-

pliers into a one stop shop. So everything you order for your practice, whether its dental or non-dental products, can be barcoded and streamlined into your Just4Dental account. Orders from vendors (affiliated partners) currently subscribed to Just4Dental are sent as an online order. For orders from

non-vendors (non-affiliated partners), ezyOrder generates a fax order form that can be printed and faxed to the non-vendor straight away. There is no need to write any orders on paper and it's a great time saver for you to be more productive at the practice. It also tracks all your online purchases for future reference.

"The quicker ordering can be done, the better," Ms Dodt said. "Nobody really sees ordering as productive time in a busy dental practice. All that is necessary is that stock is here when required, so the time saved can be used to look after our patients.

"We are like most, a very busy practice and we use the latest technology wherever possible. Anything that helps make this practice run efficiently is very much appreciated," she said.

Gunz Dental is able to assist practices to streamline their ordering processes by offering a complete purchasing management solution. Gunz Dental offers a kit that includes everything you need to start ezyOrder-ing. This kit contains the key

"I would recommend ezyOrder to anyone who is looking for a fast, easy, accurate ordering system which is very user-friendly!"

ring barcode scanner, connector cable, software (CD), installation guide, user guide and your Personal Catalogue with barcodes. To use ezyOrder, all you need is a computer supporting Windows 2000 or XP and an Internet connection via Internet Explorer or Netscape and be registered with Just 4 Dental (www.just4dental.com)

"The assistance provided by Gunz was a great help. Our Gunz rep, Teena Schick, provided us with all the information. She and Angie Wong both came to our practice and spent time training us after the software had been installed. The loading of the software was very straight forward and it has given me peace of mind knowing that the Gunz ladies have been on hand when I needed assistance."
