

# Choose your colour - choose your frequency

## Suprasson® P5 Booster with Colour Coding System

The Suprasson® P5 Booster by Satelec® is an ultrasonic generator designed for the removal of calculus and stains during routine prophylactic procedures. Rated best piezo technology by a renowned research institute (USA 2004), the P5 allows you to work in the four main clinical applications: periodontics, endodontics, scaling and prosthetics. It is a compact and powerful device, recommended for its reliability.

By matching the colour coding on the unit to that on the instrument, the P5's new power setting control indicates the optimal power range to use with the Satelec hot tips.

### The Colour Coding System is as follows:

- Low power and amplitude: green
- Medium power and amplitude: yellow
- High power and amplitude: blue
- Very high power and maximum amplitude: orange

Today more than ever the P5 is a state-of-the-art ultrasonic generator that allows the dentist or dental hygienist to perform high-quality treatments day after day with greater comfort and in more safety.

(from p1)

- 98% of dental professionals would recommend Sonicare Elite® to their patients.
- 95% of patients improved their overall oral hygiene.

It looks like the Sonicare toothbrush, along with the iPod, TiVo, E-Z Pass, and the Screwpull corkscrew, is now considered one of the five inventions/products that will "change your life while you're not even paying attention," according to Gordon T. Anderson, CNN/Money.com's "The Good Life" staff writer.

This is what was said:

- The Sonicare toothbrush. Mechanical toothbrushes have been on the market for decades, but they always struck me as triumphs over laziness rather than innovation. Sonicare is different.

It's smart, beeping to alert you when to brush a different area of your mouth. It's powerful, with soft bristles spinning like a hummingbird's wings across your teeth.

It's even, dare I say, fun. With this contraption, I actually relish the moments I spend brushing my teeth.

The Sonicare Elite has several features. These include a 30-second Quadpacer, a 2-minute Smartimer, a Deluxe recharge gauge, Dual-speed control, a Contoured brush head that lasts 6 months and the Easy-start function which gently increases brushing power over the first 14 uses.

There are two models available. The Trial Pack, for you to try and the Professional Pack for you to dispense.

Replacement Heads are available in both single and double pack configurations.

Consumer material includes 8 patient education brochures and a convenient brochure stand.

For the surgeries that are interested, Philips & Gunz are offering a 15-minute "Lunch & Learn" or "Breakfast & Learn" session.

Breakfast or lunch will be provided and during this time we will explain the features and benefits of the exciting new Sonicare.

### Adelaide Exhibition a Success

The Adelaide Convention Centre played host to the Inaugural jointly sponsored ADA Dental Congress and ADIA Dental Exhibition. The event was held over 2½ days from Friday 4th till Sunday 6th March 2005 and was attended by over 1,400 dental personnel. Each participant was exposed to a comprehensive program including both local and international speakers. In conjunction with the Congress, the ADIA Exhibition featured over 130 dental companies who displayed a gamut of the latest materials, equipment and services relevant to the dental professional.

Gunz Dental was present and displayed a full range of products from our Clinical, Laboratory, Equipment Orthodontic and Implant Business Units. Gunz was also a key note sponsor of two overseas speakers. The first was Dr Stace Lind from the USA who spoke about Oral Pathology and Dentists as Oral Physicians. The second speaker was Professor Francis Duret who spoke on Dental Materials now and into the future. Both speakers made themselves available on the Gunz stand and enjoyed mingling with attendees and answering their numerous questions.
