

Taking the mess out of mixing:

The tried and tested sealer,
**now available in a convenient
double-chamber syringe.**

- Easy-to-use, safe and fast
- Always mixed in an ideal ratio
- Can be applied directly into the root canal
- Precise application even in canals with difficult access
- Clean and convenient: no mess, no waste

- ✓ Ready to use
- ✓ Easy and direct application into the root canal thanks to the flexible Intra Oral Tip

2Seal easymiX

Epoxy-amine resin:

The ideal basis for a durable and dense filling

2Seal easymiX

The quality of the sealer used is critical for a biocompatible and long-term tight root canal filling. 2Seal fulfils all criteria cited in the Quality Guidelines of the **European Society of Endodontology!** Furthermore, epoxy-amine based sealers have been thoroughly tested in more than 90 scientific studies and well-proven in clinical application.

Dense and durable

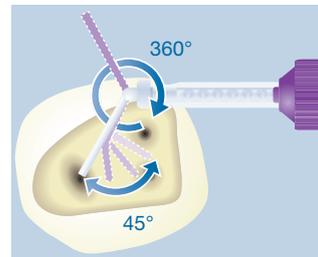

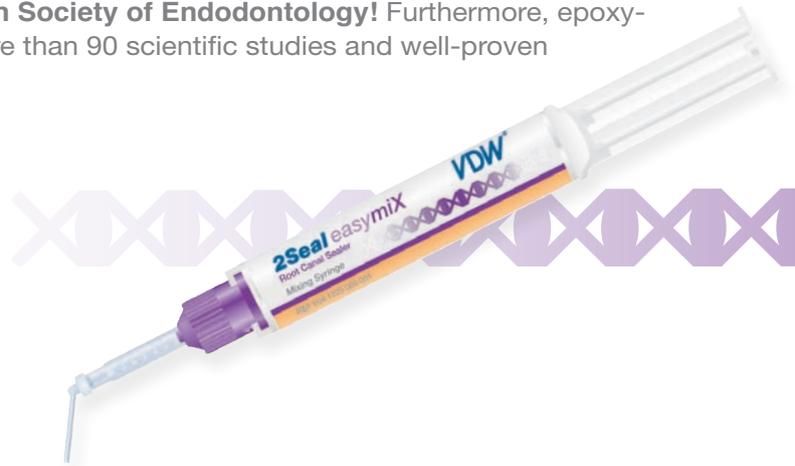

- Very low shrinkage
- High adhesion to gutta-percha and dentine, no primer necessary
- Long-term dimensional stability
- Virtually insoluble

Excellent biocompatibility

- Highly biocompatible
- Extruded material is easily resorbed and encapsulated by the surrounding tissue
- Antimicrobial

For all obturation methods

- Recommended for both warm and cold obturation techniques
- Optimal viscosity, reaches all canal areas
- Ideal radiopacity

360°-Flex
