

Euronda E10 Autoclave

Digital Traceability

In compliance with EN 13060, all sterilization cycles are saved on USB (for E10) or SD Card (for E9) and can be transferred to a PC via Ethernet or WiFi connection.

Load validation & release

This function allows users to keep a digital record of the compliance of the sterilization process in both the loading phase and the unloading phase. The operator ensures that the pouches are dry and checks their integrity and the state of the instruments, while also making sure that the sterilization parameters are satisfactory.

Print set options

The expandable traceability system allows three types of printers to be installed, depending on requirements. Set 1 and 2 can be installed at the front of the autoclave without any additional space whilst print set 3 is installed outside the device.

BUY 1 x E10 Euronda Autoclave, **\$12,995.00** RRP \$17,750.00
